Education

Northeastern University

MS in Computer Science (GPA: 3.78/4.0)

— Coursework: Algorithms, Database Management, AI, Web Development, Programming Design Paradigms

Jan 2025 – Present

Boston, MA

M. S. Ramaiah Institute of Technology

BE in Computer Science (GPA: 8.78/10.0)

— Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems

Aug 2017 – Jul 2021

Bengaluru, India

Technical Skills

- **Languages:** Python, Java, C/C++, JavaScript/TypeScript, SQL
- **Systems/Tools:** Linux/Unix, Git, Docker, Kubernetes, Terraform, Jenkins/GitHub Actions, CI/CD, Prometheus, Grafana
- **Back end & Data:** REST, MySQL, PostgreSQL, MongoDB, Redis, Kafka
- **Frameworks:** Flask, Django, Node.js/Express, React/Redux, Next.js, Spring Boot, JUnit, Mockito, PyTest
- **Cloud:** GCP (familiar), AWS, Azure

Experience

Graduate Teaching Assistant — CS5010: Programming Design Paradigms

Sep 2025 – Present

Khoury College of Computer Sciences, Northeastern University

Boston, MA

- Led weekly labs and high-volume office hours for 300+ MSCS students; **mentored** learners on Java OOP, testing (**JUnit/JaCoCo**), UML, and patterns (Visitor, Strategy, Adapter).
- **Drove code-review quality:** authored sample solutions and test suites, aligned grading criteria with instructors, and guided students on debugging, scalability, and maintainability.

Digital Workplace Engineer

Feb 2021 – Nov 2023

Schneider Electric

Bengaluru, India

- **Owned** end-to-end delivery of internal full-stack apps (React, Node.js/Flask, MySQL) for **10k+** users; defined scope, milestones, and release plans with stakeholders.
- Containerized services with **Docker** and **Kubernetes (Rancher)**; added CI/CD (Jenkins/GitHub Actions) for automated build, test, and deploy.
- **Led** Python automation initiative (Microsoft Graph API) to migrate O365 groups, cutting manual effort by **60%**; documented runbooks and hand-offs.
- Optimized SQL schemas/queries and added caching to cut API response times by **~30%**; instrumented metrics/dashboards with **Prometheus/Grafana**.
- Onboarded and **mentored** new engineers through pair programming and walkthroughs; delivered internal workshops on Python automation and Azure scripting.

Selected Projects

TRIPLAY_AI

2025

Python, OpenCV, Mediapipe, NumPy, Pandas, Pygame

- Built AI game suite: **Connect Four (Minimax + Alpha-Beta)**, **Snake (A* pathfinding)**, and gesture-based **Rock-Paper-Scissors** with OpenCV+Mediapipe.
- Achieved **91%** optimal moves in Connect Four and **88%** food efficiency in Snake across 100+ simulations; added visual explainability overlays.

ExpenseShare (Full-stack)

2025

React, Node.js/Express, MySQL, Redux

- Designed normalized schema with **stored procedures & triggers** for ACID compliance; implemented pagination and indexes to reduce hot queries.
- Delivered real-time updates and robust state management; added unit/integration tests and linting in CI.

Calendar Application (Desktop)

2025

Java, Swing, MVC, Design Patterns

- Implemented recurring events, multi-calendar support, and time-zone handling. Applied SOLID and patterns (Command, Adapter, Strategy, Visitor) for extensibility.

Box Archive (Internal platform)

2023

Python, Flask, MySQL, Docker, Kubernetes, OAuth

- Delivered document management platform; containerized with Docker and deployed on Kubernetes; integrated PingID OAuth; optimized MySQL procedures for **30%** faster responses.

Allocation Optimization of Medical Samples

2021

Python, Mixed Integer Programming, React

- Developed cost-minimizing MIP model for distributed medical testing; published IEEE paper: [Allocation Optimization of Medical Samples for Distributed Testing](#).
